

Dancing Sentence

By TopCoder*  USA

Timelimit: 1

A sentence is called dancing if its first letter is uppercase and the case of each subsequent letter is the opposite of the previous letter. Spaces should be ignored when determining the case of a letter. For example, "A b Cd" is a dancing sentence because the first letter ('A') is uppercase, the next letter ('b') is lowercase, the next letter ('C') is uppercase, and the next letter ('d') is lowercase.

Input

The input contains several test cases. Each test case is composed by one line that contains a string sentence. This string will contain between 1 and 50 characters ('A'-'Z','a'-'z' or space ' '), inclusive, or at least, one letter ('A'-'Z','a'-'z').

Output

Turn the sentence into a dancing sentence (like following examples) by changing the cases of the letters where necessary. All spaces in the original sentence must be preserved, ie, " sentence " must be converted in " SeNtEnCe ".

Sample Input	Sample Output
This is a dancing sentence	ThIs Is A dAnCiNg SeNtEnCe
This is a dancing	ThIs Is A dAnCiNg
sentence	SeNtEnCe
aaaaaaaaaaaa	AaAaAaAaAaA
z	Z
